Stock Abbreviation (English): Wellhope

**Liaoning Wellhope Agri-Tech Joint Stock Co., Ltd.**  
**2020 Interim Report**

August 2020

## Important Statements

I. The Board of Directors, Supervisory Board, Directors, Supervisors and Senior Management of Liaoning Wellhope hereby warrant that there are no false representations, misleading statements or material omissions in this interim report, jointly and severally accept full responsibility for the truthfulness, accuracy and completeness of the contents in this report.

II. All the Directors attended the Board Meeting.

III. This interim report is unaudited.

IV. The Company's Chairman Jin Weidong and the Director of internal audit Zhang Wenliang warrant the truthfulness, accuracy and completeness of the information presented in the financial statements in this report.

V. In the reporting period, there has been no plan for dividend distribution or capital reserve converted into share capital.

VI. Risk Statement of Forward-looking Statements

The forward-looking descriptions in this report in terms of plans, development strategies and other information cannot be deemed the Company's commitment to investors. Please beware of the investment risks.

VII. There has been no occurrence of the Company's non-business capital being occupied by controlling shareholder and his related parties.

VIII. There has been no occurrence of the Company violating its decision-making procedure while providing external guarantees.

IX. Material Risk Warning

The Company details possible risks in this report. Please refer to "Possible Risks" in Section IV "Business Operations Analysis".

X. This interim report has been issued in both Chinese and English versions. In case there is any discrepancy or inconsistency between the two versions, the Chinese version shall prevail. The disclosed Chinese version of 2020 Interim Report can be obtained at: [www.sse.com.cn](http://www.sse.com.cn).

## Section III Business Overview

### I. Principal Business, Operation Model and Circumstance of Related Industries in the Reporting Period

Principal businesses of Wellhope (hereinafter referred to as "the Company") primarily consist of feed production and sale, feed raw materials trade, broiler integration, hog raising and related businesses. Whilst further expanding feed business, the Company aims to take 5-8 years to vigorously boost broiler integration and hog raising businesses, forging an operation model fueled by broiler and hog integration businesses to further heighten its market power in animal husbandry industry.

#### 1. Feed and feed raw materials trade

##### A. Industry overview

The gross production of China's commercial feed reached 229 million tons in the year of 2019, which exceeded its target of 220 million tons in advance, according to the 13th Five-Year Plan of the feed industry. Its gross output of more than 200 million tons for 5 years on end, has ranked top one for 9 consecutive years worldwide. It is expected that national feed production will achieve further breakthrough in 2020. At the beginning of this year, the spread of Coronavirus Disease 2019 (referred to as COVID-19 hereof) led to nationwide suspension and stoppage of production. In the initial stage of COVID-19, adverse factors such as transport restriction, rising freight rates, tight supply of raw materials and panicked market, etc., have caused definite impacts and influences on the feed industry. Based on the promulgated government policy of "fulfilling the responsibilities of safeguarding residents' vegetable and meat supply" and along with gradual stabilization of this pandemic, the production and supply of feed industry has gradually returned to normal level in the second quarter. The COVID-19 and African Swine Fever (referred to as ASF hereof) reset the trajectory of feed industry and accelerated the pace of consolidation, weeded out unqualified players. Against this backdrop, those large-scale enterprises with robust system capacity and competitiveness who have been still able to retain high-quality products and services during in the pandemic crisis, thus obtained greater development opportunities.

In the first half of 2020, rapid recovery of both hog and reproductive sow inventories in China pushed up the demand of swine feed. The national output of sow feed has realized

year-on-year growth for 5 consecutive months with a 54% increase in June. Statistics released by the Ministry of Agriculture and Rural Affairs indicated that beef and mutton production was up 3.4% over a year earlier, eggs and milk production have year-on-year growth rates of 7.1% and 7.9% respectively. This also led to an increasing demand within the poultry and ruminant industry. There were 76,000 new hog raising enterprises in China, with a growth rate of 109% compared with the same period of prior year. High hog raising enthusiasm driven by high profit has brought well-known real estate companies and internet giants stepping into this cross border business, also broadened opportunities for the feed industry.

In June 2020, China's gross feed production increased by 2.2% compared to the preceding month and 7.5% over a year earlier. Judging from the trend, the aggregate output of feed increased on a month-on-month basis in March, April and June. Despite a slight year-on-year decline in March, the output of all other months has gained year-on-year growth since February and reached a record high in June within the last three years. From the perspective of varieties, swine feed output in June increased by 9.3% over a year earlier, which has recorded positive growth again since October 2018. The production of layer, broiler and ruminant feed rose by 14.1%, 10.4% and 9.8% respectively, whilst aquatic feed fell by 11.6%. Overall, in the first half of 2020, the feed consumption was higher than market expectations with a remarkable recovery, which showed a booming trend in both production and marketing.

Note: Source of above-mentioned data—China Feed Industry Association

## **B. Business profile**

The Company manufactures and sells animal feed for swine, poultry, ruminant, aquatic and fur-farmed animals, which are marketed in 29 provinces and regions across China. It has also built feed plants in Nepal, Indonesia and the Philippines, etc. Driven by the principle of “constantly working on new products, never following the beaten path”, the Company always designs tailor-made products for animals in different growth stages and it is committed to offering farmers integrated services in terms of animal raising, disease prevention as well as operation management, helping them to achieve the best economic benefits.

The subsidiary trade companies mainly trade in feed raw materials in terms of fish meal,

soybean meal and co-products of corn, also engage in feed additives including amino acid, antioxidant, mold inhibitors and vitamin. In addition, the trade companies are the sales agents of animal health products such as vaccines and veterinary drug produced by global strategic suppliers. Meanwhile, the Company also launched pet clinics business. Now its trade business is active in the regions of Northeast, Northern, Eastern and Southwest China, Guangdong province and other areas, some products have been exported to Nepal, Mongolia and other countries.

## **2. Broiler integration business**

### **A. Industry overview**

The outbreak of COVID-19 in early 2020 had a huge impact on national economy and disrupted the original supply and demand pattern of white feather broiler industry.

Regarding supply, the overall supply of white feather broiler in China resumed year-on-year growth from January to June, yet the growth rate fell short of expectations. In terms of grandparent stock, the renewal in the first half year slightly changed in comparison to the same period of prior year, but decreased by about 36.8% compared with prior month, presenting a slower expansion of grandparent stock' production capacity. In terms of parent stock, the output of day old chick of parent stock realized an increase of approximately 30% over the same period prior year. However, under the impact of COVID-19, the market was mandated to cut production capability by forced molting and faster eliminating week-old broilers, making the inventories of forced molting broilers decline significantly. In terms of commercial broiler, COVID-19 impaired the production capability of white feather broilers in the first quarter, while along with gradually stabilized pandemic in April nationwide, thus the deliveries of commercial broiler stepwise recovered to a high level in May and June. Looking back the first half year, the deliveries of domestic commercial broiler increased by about 4% over a year earlier. Compared to that was expected before the COVID-19, the growth rate was lowered about 8 percentage points.

In regard of demand, chicken has still played the role of filling the gap in consumption caused by a severe shortage in China's pork supply. However, the increasing demand for chicken declined due to the outbreak of COVID-19, which led to dropped profits of related businesses in the industrial chain. In the first quarter, the COVID-19 influenced domestic

consumption relatively hard with a presence of the sharp decrease in catering and group meal. Affected by this, the overall consumption of chicken dropped off about 10% over the same period prior year, among which, chicken consumed by catering and group meal decreased by more than 30%. However, the demand has been recovered since the pandemic being stabilized in April. In May and June, positive factors, such as social contact basically resumed, some schools were reopened, a vast majority of enterprises were back to work, the sales channels of chicken hampered by the epidemic situation was recovered in succession, the supply of pork was lower still, etc., effectively boosted the recovery of chicken consumption. It is worth mentioning that COVID-19 has led to a temporary closure of social venues and home quarantine, which has directly altered the path for chicken consumption. Away-from-home consumption, such as catering and group meal, has shifted to at-home consumption, thus pushing chicken producers to change their marketing strategies and step up efforts to expand the consumer market.

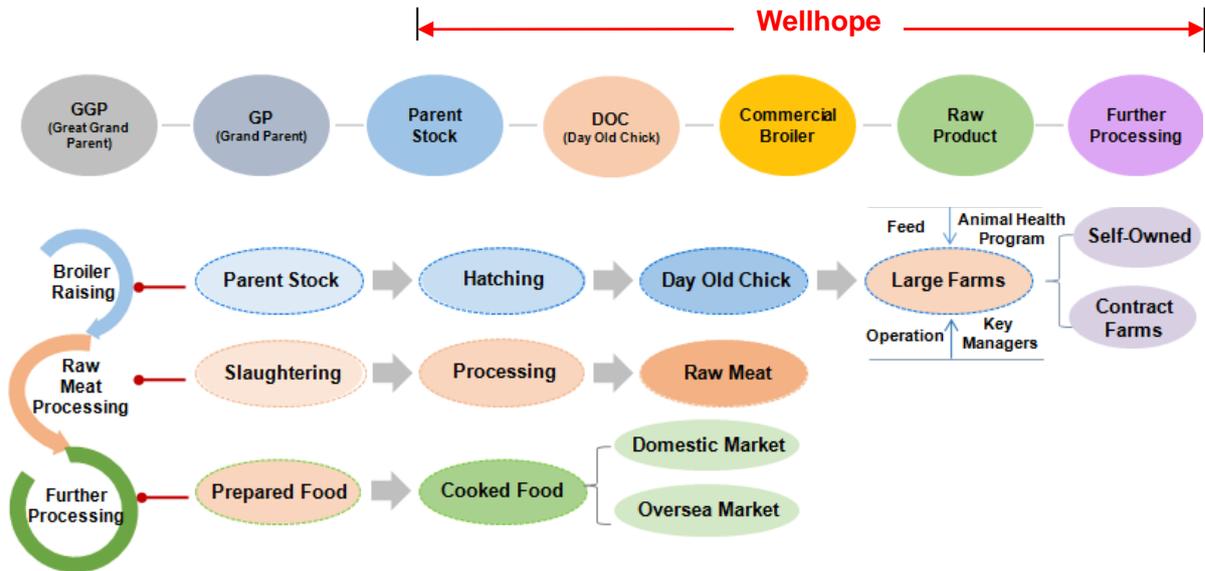

To conclude, in the first half of 2020, COVID-19 has broken the original expectations of “an increase both in production and sales, a bloom both in supply and demand” within white feather broiler industry. Instead, the growth rate of broiler supply was compressed, while the demand of chicken was changed from increase to decrease. In the second half year, chicken consumption demand is expected to rapidly rebound, while the import of meat products will slow down due to the impact of COVID-19. In addition, stocking density that limited by ASF will weigh on the recovery of domestic hog production capacity, yet the substitution demand caused by the shortage of pork will still be significant.

Note: Source of above-mentioned data—[www.boyar.cn](http://www.boyar.cn)

## **B. Business profile**

The Company's broiler integration business, with three business units in terms of broiler raising, raw meat processing and further processing, owns more than 40 holding and associated entities, which are mainly located in the provinces of Liaoning, Hebei, Henan, Jilin and Shandong, etc. Its value chain contains breeding, day old chick hatching, feed producing, commercial broiler raising, slaughtering and processing of raw meat, further processing of prepared and cooked food. The integrated operation can effectively ensure the production and supply of all operating segments and facilitate the Company to control food safety across the entire chain. Meanwhile, through standardized management and

streamline operation, the Company consolidates the controls of bio-safety, drug residue and in-process hygiene to achieve traceable food safety. Based on the number of broilers slaughtered by holding and associated plants, the Company has stepped into the first echelon of white feather broiler industry and become one of the leading suppliers of broiler products nationwide.

◆ **Broiler raising:** This unit covers breeder raising, day old chick hatching, commercial broiler rearing and feed production. By formulating scientific and rational feeding programs, light programs and disease prevention systems for breeders, the Company provides qualified eggs for the hatching farms. Meanwhile, it has established thorough management system in the hatching process and introduced intelligent facilities that are available for hatching in batches, also equipped high-efficient and energy-saving hatcher and micro-environment control system for supplying healthy day old chicks. Entering commercial broiler sector, the Company mainly raises broiler by own farms and contract(out-sourcing) farms under the pattern of unifying nine aspects, including unified site selection and planning, unified construction standards, unified day old chick supply, unified disease prevention, unified feed supply, unified drug supply, unified technological guidance, unified testing and unified slaughtering and processing. Guided by scientific raising standards, all the farms apply three-tier cage system and automate all the processes from feed intake, water temperature to moisture control, etc., meanwhile, the farms combine crop planting with animal raising to reduce manure pollution and promote resource recycling. The weight of the Company’s commercial broiler has reached over 3.0

kg with the livability of over 95%, and the European production index exceeded 390, which have received wide recognition from the cooperative farms.

◆**Raw meat processing:** The Company has invested 16 holding and associated slaughtering and processing plants, which are equipped with domestically state-of-the-art production lines that are available to slaughter 650-750 million broilers per year. Driven by all-in and all-out inspection and quarantine, every single plant has established a total quality guarantee system and traceability system to monitor all the processes. Meanwhile, the Company constantly strengthens and improves slaughtering and processing techniques by ways of systematic pre-job training and skill promotion training as well as conducting "6S" management (i.e., Seiri, Seiton, Seiketsu, Shitsuke, Seiso, Safety), making the killing-out percentage and per capita slaughtering efficiency stand out among companies with similar scale. Now the Company's broiler parts products have entered the supply chain of Shineway Group, Jinluo Group, Yurun Group, China's McDonalds and KFC, Yoshinoya, Wallace, Dili Fresh Food, Yonghui Superstores, RT-MART, food service companies and other local fresh food markets, etc., in the meantime, related products have also been sold to the regions of Hong Kong and Macao, and exported to some countries in terms of Mongolia and Bahrain, etc.

◆**Further processing:** Relying on the advantage of integration, the Company uses high-quality chicken supplied by own slaughterhouses as raw materials and introduces efficient and energy-saving equipment to process raw meat into prepared products. At present it supplies over 100 kinds of further-processed chicken products to large restaurant chains, supermarkets, local markets, canteens of enterprises and schools. In terms of online marketing, Wellhope's flagship store of raw meat product has been launched on JDcom, whilst its official food store has been initiated on Taobao, some of independent-brand products of Wellhope's subordinated companies have also been entering e-commerce platforms of some residents' communities. Moreover, under the backdrop of continuous expansion of consumer demand, the Company has vigorously explored its food export business, now some products have entered the markets of Japan and South Korea.

### 3. Hog raising business

#### A. Industry overview

In the first half of the year, as hog supply fell into a sharp slump, recovering production capacity was still the central theme of hog industry, whilst the overlap of ASF and COVID-19 pandemics made the supply and demand pattern more complicated.

On the supply side, taking more commercial sows as breeders in the fourth quarter of 2019 has further widened the gap between pork supply and demand. In the first half of 2020, China's hog deliveries continued to decline and caused tight supply of pork. From January to June, hog deliveries fell by 49.89% on a year-on-year base, declined by 19.23% compared to the second half of 2019; pork production fell by 41.21% over a year earlier, went down 9.76% compared to the second half of 2019, whilst piglet supply decreased by 30.54% on a year-on-year base and dropped off 3.61% compared with the second half of 2019. Thereby, certain policies have been issued to stabilize hog production and ensure pork supply. Large-scale enterprises have been continuously expanding their businesses to capture market opportunities supported by their financing, technology, talents and other advantages. Some companies that fatten hog by own farms and contract farms also upgraded the selection criteria for cooperative farmers to stock more than 500 heads of hog, which quickened the process of large-scale raising, thus the decline of production capacity gradually slowed. The domestic sow inventories bottomed out in October 2019 and rebounded modestly. Coming to this year, the reproductive sow inventories increased by 13.65% on year-on-year base in the end of June, 16.41% higher than the end of 2019. However, it is remarkable that, as at the end of June, the percentage of commercial sows taken as breeders exceeded 60% of reproductive sows, which would bring great uncertainties in the production performance.

On the demand side, the COVID-19 has inflicted a rather big impact on national economy, the sales of high-priced pork became difficult under this backdrop. Away-from-home food consumption such as catering and group meal was hindered, which boosted the percentage of at-home consumption increasing. Driven by the increased pork consumption fueled by two festivals and the difficulties in purchasing hogs due to the obstructed logistics in the early stage of COVID-19, hog prices shocked up to RMB 38.0 per kg in January and February. Since March, a series of government policies were promulgated to stabilize production and maintain supply, whilst the decreased final

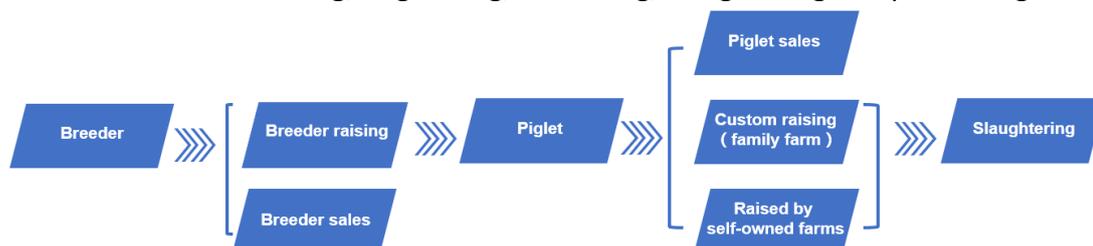

consumption led to declined hog prices, especially in May, the prices fell drastically to RMB 27.0 per kg caused by certain adverse factors, such as, the recovery of domestic consumption was lower than expectation, circumstances of COVID-19 abroad continuously worsened, market confidence weakened and farmers sold out hogs in a panic. Later, many large overseas meat processors shut down due to the pandemic, China also suspended pork import from infected enterprises. Meanwhile, the gap between pork supply and demand emerged again supported by gradual recovery of domestic consumption, hog prices bottomed out in late May and rose back to over RMB 35.0 per kg in June.

To conclude, hog market still showed strained supply--according to third-party research institutions, hog deliveries are expected to go down 30% compared to 2019, accompanied by a 20-25% decline of pork production. Besides, bio-safety has heightened the entry barriers of hog farming industry and the pace of consolidation has been constantly improving.

Note: Source of above-mentioned data—www.boyar.cn

## B. Business profile

Through solely-invested and co-invested operations, the Company has actively built farms and expanded businesses in Liaoning, Jilin, Heilongjiang, Henan, Hebei, Anhui provinces and other areas suitable for hog raising. Among these projects, the farms located in Hebei and Heilongjiang provinces were jointly built by the Company and Hunan Jiahe Agriculture and Animal Husbandry Company, top-15 in hog raising industry nationwide, the farms located in Anhui province were jointly constructed with Anhui Haoxiang Agriculture and Animal Husbandry Company, a leading enterprise in agricultural integration in Anhui province and a member of the National Hog Joint Breeding Cooperative Group, other farms were invested by the Company solely. At present, the Company's hog raising business mainly adopts the operation model that composes of breeder raising and sales, commercial piglet sales, hog fattening via own farms and family farms(contract). At the same time, each sow farm has boar house to reserve excellent boars to maintain breeding advantage. Through establishing strict bio-safety system, advanced breeding system and scientific feeding management system, the Company is devoting to crafting an integrated chain that contains breeding, hog raising, marketing, slaughtering and processing.

**a. Building farms with high-standard:**

In compliance with the principle of moderate scale for every single farm along with the site planning of multi-point layout, the Company strictly controls bio-safety and dynamically combines hog raising with planting via eco-friendly technologies to protect environment. Driven by the goal of building first-rate modern farms, Fushun farm located in Liaoning province was jointly designed by well-known domestic experts and Architectural Design and Research Institute of Tsinghua University CO. LTD., breeder farm located in Jilin province introduced efficient Dutch farm management technology, whilst the farms located in Hebei and Henan provinces introduced Danish breeding management system. All newly-built and under-construction projects have been equipped with advanced production technique and equipment. In particular, the Company has carefully designed the bio-safety systems for farms. Through automatic and information-based means such as smart feeding system, environmental control equipment and production management software, the intelligent hog raising system has been established to realize a hog raising model based on equipment, environment and information, so as to create a comfortable growth environment for animals and improve production efficiency.

**b. All-round operation:**

**In terms of genetic selection and breeding:** The Company introduces high-quality breeders with French, American and Danish gene to match different business areas to provide parent stock with pure blood and clear pedigree, truly grasps the source to supply excellent breeders, commercial piglets and finishers to enhance the Company's core competitiveness in the field of hog raising, which is conducive to forge the synergy effect among hog raising business with feed and other businesses.

**In terms of nutrition and supply:** Relying on Europe's technical practices and self-accumulated experiences in swine feed technology and hog industry, the Company has launched a system-wide database to dynamically formulate nutrition for animals. The Company, according to data and conditions of raw materials and hog markets, timely and dynamically adjusts diet nutrition, feed processing technique and product portfolios to realize tailor-made nutrition, accurate production and precise feeding, as well as to reduce operating cost, improve production performance and provide marketable hogs. Moreover, the Company has established antibiotic-free nutrition system and successfully changed all

swine feed to antibiotic free (referred to as ABF hereof).

**In terms of bio-safety prevention:** Relying on well-designed bio-safety control system, all the Company's farms have been strictly equipped with bio-safety facilities and equipment, applied corresponding quarantine and blocking schemes for the areas with different safety level in the farm, meanwhile, all the farms are continuously optimizing and upgrading related facilities. Besides, a professional team has been set up outside each farm to conduct off-site bio-safety work, especially for breeder farm (there should be no other farms within at least 3 kilometers). In the meantime, the Company has established a diagnostic system for ASF by fluorogenic quantitative PCR and implemented monitoring and early warning of risk points through real-time patrol inspection by bio-safety supervision department and engineering department to ensure farm safety. In addition, the Company regularly trains the staff in the farms about bio-safety principles and daily operation details, and continuously improves the safety awareness of all staff via various means such as job rotation and inspection notification.

**In terms of feeding management:** The Company's farms adopt benchmarking management to enhance internal operation and reduce costs in the aspect of bio-safety prevention, production performance, equipment and facilities, etc. At the same time, the farms analyze key indicators related to production and other data through internal management system to immediately adjust diet, micro-environment control, immune health care and herd structure to ensure orderly feeding management.

## **II. Core Competitiveness Analysis within the Reporting Period**

Core competitiveness of the Company lies in a highly educated, loyal and stable management team, rationally planned and steady-development based business strategy, increasingly matured and competitive business distribution, systematic, scientific and unceasingly innovated technology system, constantly enhanced and full-fledged Wellhope Brand, development-oriented and strongly rooted corporate culture.

### **1. Highly educated, loyal and stable management team**

Talents are the primary resources and the core competitiveness of the Company. The management team, led by seven founders, are highly educated with professional background. They have deep insights into the Company's core value and corporate culture. They have been united, stable and always fighting in the front line of business operation

with strong cohesion. The seven founders, who are praised as "Seven Pioneers of the Industry", always hold together and fight together, the high solidarity of the start-up shareholders has become the Company's most significant competitiveness, whilst "Unity is Power" is also part of the core culture. Almost all the middle and senior managers are internally selected and cultivated by the Company, the core members have been granted with many forms of medium and long-term incentives, they have strong sense of ownership and devote themselves to the sustainable development of the Company. For the past 25 years, the management team has maintained high stability, almost none of the chief director and higher-level managers leave the Company. In regard of over 100 general managers, besides those who are adjusted due to substandard performance, few of them quit the job. Meanwhile, newly promoted members of the management team born in the 1980s and 1990s are selected from key talents' cultivation programs, such as "Seedling Plan" and "Sunflower Program". They love the Company, highly recognize the corporate culture and have become the backbone force of the management team. The Company also attaches great importance to the continuous learning and ability improvement of these managers, providing them with different training programs, including Executive Development Program, Leadership Training Camp, etc., which include strict training, appraisal rules and opportunities for managers to study from some leading companies at home and abroad so as to expand their horizons for further progress. The main reason that causes the failure of some domestic companies has been the "unstable and disunited management team". In contrast, the highly educated, loyal and stable management team is one of our core competitiveness, boost the Company's having confidence to move forward.

Continuous talent growth and supply can be attributed to the advanced human resource policy. In terms of talent introduction, the Company always adheres to the principle of high-standard recruitment and upholds the core culture of "knowledge is power, unity is strength". In terms of talent training, the Company formulates progressive and dual-channel training system according to its strategic goals and the needs of staff's career development to help them to grow. In terms of talent incentives, the Company continuously improves and optimizes the remuneration policy, providing a fair, just and merit-based environment for rewarding employees. It also conducts separate performance

appraisal system for the sales team and administrative departments to keep the team dynamic. At the same time, driven by the principle of "sharing bumper harvest", the Company shares its development achievements with managers in various ways, such as holding shares in parent company and subsidiaries, profit sharing and elasticity welfare. In 2018, the Company carried out share incentive program, where 372 core talents were granted restricted shares. Through this program, the interests of Company, shareholders and key-employees have been combined to ensure the sustainable and stable development of the Company and ultimately achieve mutual benefits for all. In the meantime, the Company has been echeloning its talents team based on corporation strategic to build a more competitive and sustainable team to realize its long-term goal.

## **2. Rationally planned and steady-development based business strategy**

Based on in-depth understanding of domestic and global politics, economies and industries trends, the Company has always attached great importance to its sustainable development and risk control, focused on operation quality and investment return of new projects. Driven by a stable and conscientious attitude towards investment, the Company, with a goal of building to last, rationalizes its business layout and boosts expansion step by step instead of investing and expanding businesses rashly, to maintain the rationality and safety of industrial structures and to avoid all sorts of risks.

**Rationally planned and steady-development based business strategy reflects in the following aspects:**

### **a. Business divisions**

Starting from premix business, the Company has been dedicated to expanding its feed business over the years, at present it has become one of the top 10 commercial feed producers nationwide. In 2008, the Company entered broiler integration business after strategic considerations. After 12 years of efforts, the number of broilers slaughtered by the Company's holding and associated entities has been standing in the forefront of the white feather broiler industry, with its management and key technical indicators ranking the top both at home and abroad. In 2018, under the considerations of seizing market opportunities and controlling operating risks, the Company decided to take hog raising as a strategic business after careful evaluations and investigations. Since then, it has been faster forming the core competitive of this business through talents cultivation, practice

accumulation and cooperating with leading companies. Meanwhile, in the year 2018, the Company further confirmed its development strategy in the next ten years, i.e., whilst unceasingly expanding feed business, it would further boost broiler and hog integration businesses to create an operation model powered by these two complementary engines. Such business layout with high risk hedging will not lead the Company to the woes and ebbs due to tremendous blow or sharp downturn suffered by one of the businesses.

#### **b. Operation model**

The Company has gradually formed a value chain with high competitiveness and capability of withstanding risk in the fields of feed production and selling, animal raising, slaughtering and further processing, which enables all business divisions to connect closely, reduce the cost of intermediate processes, lower trading risks, improve profit margin and ensure food safety. Such set up has become a future direction for agricultural companies under an increasingly complicated and changing economy.

#### **c. Market expansion**

Instead of rapidly expanding nationwide markets supported by the success of feed business in Northeast regions and broiler integration business, the Company, with rich experiences in market expanding, insists on exploring new markets based on overall analysis and investigations, entering the markets step by step in Northeast, Northern China, Henan, Shandong provinces and other areas, always moves forward steadily and pursues asset-light operation, making much account of operation efficiency and returns on investment.

#### **d. Product mix**

The Company has a full range of feed products. The sales volume and development of swine, poultry, ruminant and aquatic feed products have achieved great achievements respectively, which could avoid operational risks caused by diseases in animals or other circumstances.

#### **e. Financial risk control**

The Company always attaches great importance to financial risk control. Since going public, it has gradually improved internal control system, regulated corporate governance and enhanced the awareness of risk control to avoid financial risks. The Company takes a vertical management in finance, managing loans, cashes and guarantee policies in a

centralized manner to improve capital usage efficiency, lower capital costs and ensure capital safety. Meanwhile, it effectively controls liabilities and financial costs according to economic circumstances, industry development and internal operations. The asset-to-liability ratio was 32.31% at the end of reporting period. Due to outstanding operating indicators and risk control, the Company was rated as one of the Top 50 Financial Health Companies listed on the main board market by the Data, a new media platform of China's Securities Times, only three enterprises involved in agriculture and animal husbandry industries were selected. Entering 2020, corporate risk control becomes critically important especially under the complicated political and economy caused by COVID-19. Thus, the Company will further improve its risk control whilst maintain stable operation.

### **3. Increasingly matured and competitive business distribution**

The advantages of the Company's business distribution mainly reflect in geographical location and business portfolio.

#### **a. Geographical location**

The head office of the Company is located in Shenyang of Liaoning province, with its main businesses mainly distributing in Northern China, especially in the Northeast regions. Northeast China is a potential growth area for animal husbandry designated by the government, where is suitable for agricultural companies to expand business supported by its high-quality raw materials, mild climates, low raising density and relatively low human resource costs. For instance, corn produced by Northeast region, featured by high bulk density, low toxicity and low moisture, enables the Company to reduce purchasing costs whilst ensuring feed product quality. Meanwhile, white feather broiler production of Liaoning, Jilin, Henan, Hebei and Shandong provinces, where the Company's broiler integration business mainly distributed in, account for over 75% of national production, and these areas are the most important regions for developing white feather broiler industry in China, with a good basis for broiler raising and more mature marketing system. Moreover, the Company actively explores overseas markets in answering the call of "the Belt and Road Initiative", building plants in the Philippines, Indonesia and Nepal, where animal husbandry develops well with high potential.

## **b. Business portfolio**

Centered on agricultural and animal husbandry industries, the Company adopts the layout strategy of "diversification and integration" to constantly optimize its business portfolio, which has increasingly heightened its capacity of risk withstanding and sustained profitability. In terms of diversification, the Company has been further expanding its feed business, whilst vigorously promoting its broiler and hog integration businesses, aiming to build an operation model powered by these two integrated businesses. The staggered fluctuations in broiler and hog industries can effectively weaken risks from cyclical swing and promote information sharing and synergy effects among the Company's different business divisions. In terms of integration, both from seeing the history of companies in agriculture and animal husbandry industries in developed countries and seeing China's rapidly changing industrial landscape, the integrated business model is the inevitable direction for domestic companies that are active in these two industries. After years of development in the raw materials trading, feed, animal raising, slaughtering, further processing and food businesses, the Company has basically formed a value chain with competitiveness and risk prevention, meantime, it is gradually perfecting the supporting capability of each business segment in the chain, whilst constantly standardizing and optimizing know-how and operation system to further enhance the synergy effect among them.

## **4. Systematic, scientific and unceasingly innovative R&D system**

The Company's R&D system always lives up to the mission of "using advanced technology, excellent service and outstanding products to promote the development of China's livestock industry, conserving resources, protecting the environment, providing food security and benefiting the society". Driven by the market-oriented and customer-oriented principle and the goals of "safe products, stable quality, tailor-made nutrition and powering business performance", the R&D team is constantly innovating technology and developing new products.

### **a. Excellent R&D team**

Relying on a relatively complete industrial chain, the Company has built a R&D team specialized in animal raising, product formulating, manufacturing and other technologies in the fields of feed, poultry, hog, biological feed additive, etc. Assisted by more than one

hundred masters, doctors, professors and senior experts who have profound knowledge and experiences, the R&D team has applied cutting-edge technology into practice to boost the Company's know-how improvement. Relying on powerfully technical strength, the Company has received national and local level of accreditations and honors, including National-recognized Enterprise Technology Center, National and Local Collaborative Engineering Research Center for New Biological Feed, Branch Center of Feed Processing of National Agricultural Product Processing, Comprehensive Trial Farm for National Hog Raising Industry Technology System, Agricultural Products Further Processing and Bio-pharmaceutical Industry Cluster of Liaoning Province, Innovation Team for Feed Technology and Safety of Liaoning Province.

#### **b. Competitive R&D cooperation**

In 2006, the Company partnered with Royal De Heus, a centurial-old Dutch company. By drawing on its global reach, advanced technical resources, leading know-how and a century of management experience, the Company has made breakthroughs in safe and high quality feed, precise and efficient nutrition as well as ABF technology. The R&D teams of the two sides have maintained high-frequency exchanges, which enables the Company to keep abreast of the world's latest technologies. Meanwhile, by combing own 25-year's technology with the latest technology in the industry, the Company is committed to providing customers with high quality products and technical service, it has also established technical cooperation and other cooperative projects such as "Academician Workstation" and " Official Research Base for Postdoctoral Fellows".

#### **c. Fruitful research achievements**

In the first half of 2020, the Company has initiated over 40 research projects. By far 70 patents have been authorized, including 47 patents for invention. It also received two National Science and Technology Progress Awards, one National Technological Invention Award and nearly 20 Science and Technology Awards at provincial-level and ministerial-level. In the first half of the year, the Company led and participated in more than 10 sci-tech projects and setting national standards and group standards, including formulating 7 group standards for Concentrate Supplement with Co-Fermented Bacteria and Enzyme for Lactating Cow organized by Beijing Bio-feed Industry Technology Innovation Strategic Alliance. As an organizer, the Company undertook the major sci-tech

project of Liaoning province- Feed Quality and Safety Control and Low Protein Feed in 2019 to 2021 with other 8 companies. Meanwhile, the Company participated in related projects, including Jointly Building Chicken Net Energy Nutrition Technology System chaired by Professor Guo Yuming from China Agricultural University, and the Application of Fermented Feed for Piglet under Antibiotic-free Farming together with Zhejiang University. As the leading organizer, the project of Research and Promotion of Energy-saving and Eco-friendly Animal Feed won the second prize of Science and Technology Award of Liaoning province, the project of the Establishment and Application of Swine Intestinal Homeostasis Nutrition Technology System cooperated with Professor Zheng Xin from Jilin Agricultural University, has been approved by the re-examination of the first prize of Jilin Province Science and Technology Progress Award. Moreover, the R & D team successfully screened and designed a series of high cost-effective antibiotic-free feed formula solutions, which had been fully applied before the end of June, showing stable performance in the farms and being well received by customers.

Along with continuously improved nutrition technologies and farming programs, related technologies in the field of broiler and hog integration businesses have been becoming increasingly mature. Through researches on nutrition strategy, feed processing and feeding program, the growth performance and slaughtering performance of animals have been further improved, which maximized the value of single animal.

#### **d. Top-class testing ability and database**

The Company's R&D and testing center has been accredited as National Laboratory by CNAS (China National Accreditation Service for Conformity Assessment), equipped with advanced testing equipment and composed of three types of testing rooms in terms of physics and chemistry, microbiology and precision instruments. From micro to macro, the testing center is able to secure quality in every step. The Company has become one of the first companies capable of testing prohibited additives. As a national key laboratory, its test results can be recognized in 60 countries or regions around the world. Meanwhile, the Company has established own raw material database and shares data resources of the Dutch partner, using regression equations to calculate the energy dynamics of raw material, whilst basing on animal's growth performance and feed intake to precisely formulate nutrition with lowest cost to achieve the best cost-effective.

## **5. Constantly enhanced and full-fledged Wellhope Brand**

The Company has successfully established its product and corporate brand in domestic agriculture and animal husbandry industries over the past 25 years. As related industries keep evolving, its brand effect will be further highlighted.

### **a. Product brand**

Over the years, relying on leading-edge technology, high quality products and continuously improved customer service, the Company's brand has been widely recognized and trusted by customers. With the outbreak of ASF, the demand of products with high nutrition and immunization rose, moreover, high pork price fueled the need of products with high yield and fast weight-gain. In the first half of 2020, the Company's swine feed realized a year-on-year growth rate of 61%, such explosive growth could prove the products' high quality, R&D strength and market recognition. Meanwhile, the brand "Wellhope" has been honored as Liaoning Province Famous-brand Product, Liaoning Province Famous Trademark, China Famous Brand, China's Top 500 Most Valuable Brands, Most Influential Brand in National Animal Husbandry Industry, Trustworthy Product in China's Feed Industry, etc. In 2019, the Company won the Liaoning Governor's Quality Award for its excellent business management and product strength.

### **b. Corporate brand**

Driven by the core values of "Integrity, Responsibility, Win-Win", some of the Company's businesses are joint ventures with partners, it has been working together with many partners for more than 10 or even 20 years, including a 14-year's good relationship with Royal De Heus. These successful cases of cooperation can adequately prove that "Wellhope", as a corporate brand, has been well recognized and trusted by its partners. Meanwhile, the strength of the Company's brand can also be proved by long-term strategic partnerships with some multinational and domestic suppliers, by financial institutions granting loans on credit due to our good reputation. As an employer brand, "Wellhope" has been recognized and favored by employees as well as pursued by job seekers. In 2019, in the recommendation and selection of national model enterprise or industrial park with harmonious labor relations initiated by the Ministry of Human Resources and Social Security, the Company was awarded as "National Model Enterprise with Harmonious Labor Relations", commended by the National Tripartite Evaluation and

Commendation Office, it was also awarded as the "Best Employer" again by Zhaopin.com. Meanwhile, the Company's online recruitment and "Wellhope Cup" research paper contest held in the first half of 2020 displayed the strength of its employer brand.

## **6. Development-oriented and deeply rooted corporate culture**

After 25 years of development, the Company has formed development-oriented and widely recognized corporate value, among which, the core value of "Integrity, Responsibility, Win-Win" and the management culture of "Innovation, Efficiency, Self-Discipline", have been deeply entrenched in the thinking and behaviors of employees. The core culture, represented by Wellhope Vision, declared at the very beginning of establishment, which is mainly described as "Always put customers' needs first and constantly work on new products, never follow the beaten path, always conduct business honestly, always aim to provide value to our society and to maintain sustained growth through technology, innovation and creative work", and by Wellhope Mission, described as "Save resources, protect the environment, provide food security and benefit the society", has become the basic principle of business operation of the Company and powers its further progresses.

In the aspect of publicizing and implementing corporate culture in 2020, the Company aims to further implement its culture into practice and combine the implementation with performance appraisal, making culture integrate with the operation of each business line. It is planned to hold 4 times of live streaming with the theme of "Telling Stories Experienced in Wellhope", 40 employees and managers have been invited to tell stories by their side. The first session attracted 110,000 viewers, which vigorously publicized Wellhope culture. Meanwhile, the Company ushers in its 25th anniversary in 2020, it will utilize this opportunity to carry out a number of culture promotion activities, including brand and marketing promotion competition, physical fitness programs involving all our people, job skill competition, essay writing, photography, calligraphy and painting activities, etc., to enrich staff's leisure life and display their strengths. Moreover, its Corporate Code of Conduct will be launched in the second half year, which will integrate the practice of core values with all staff's performance appraisal.

In the face of COVID-19 in 2020, the Company is one of the first agricultural enterprises to resume work. In order to maintain operations and meet customer's demand, many

managers and employees overcame difficulties to actively return to work, doing their best to organize production and ensure supply. Their devotions and passions touched our staff deeply. The Company, together with managers and employees, donated more than RMB 12 million of materials and money for pandemic control. All these stems from the strength of the Company's culture, the sense of mission and responsibility as well as the love for the Company. The history of the Company fully proves that each time when Wellhope faces difficulties and trials, the corporate culture assists it to defeat hard time and to soar to broader horizons.

## Section IV Business Operations Analysis

### I. Overview

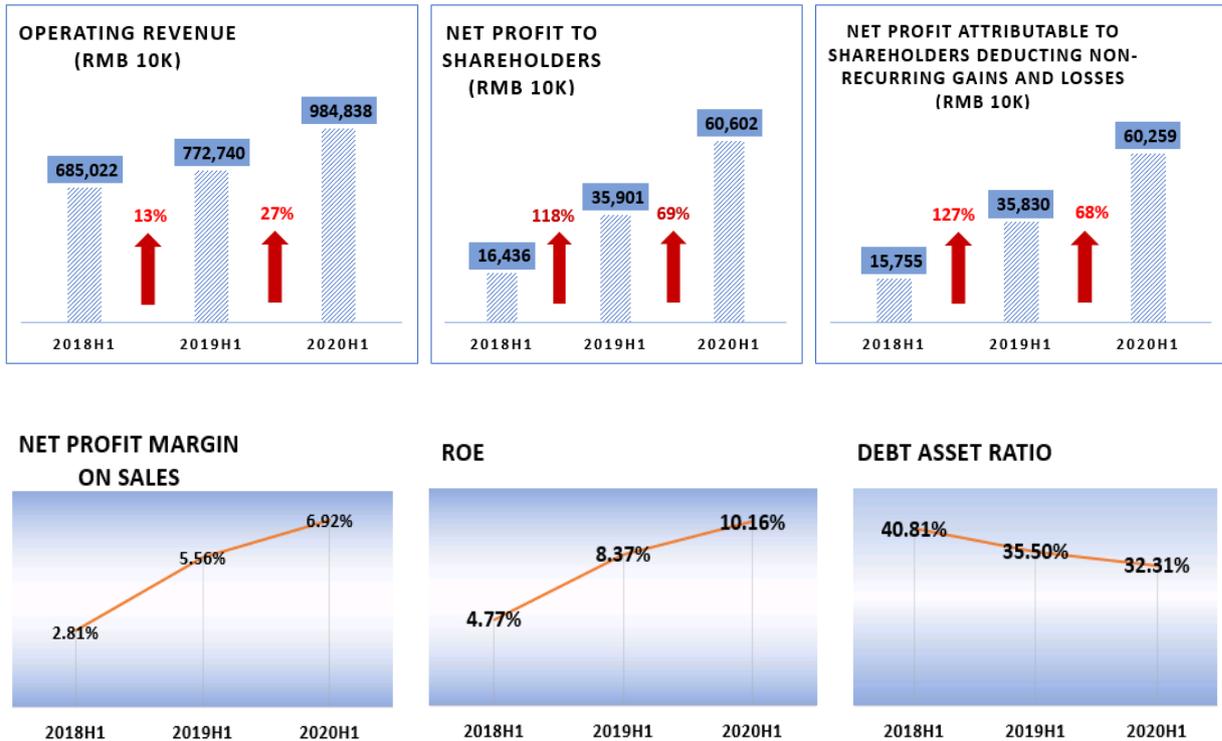

In the first half of 2020, worldwide spread of the COVID-19 pandemic has hit global economy particularly hard; the Sino-US relationship continued to deteriorate, whilst the political and economic situation became extremely complicated; the ASF situation remained severe due to the impact of heavy precipitation in the south China. Pressured by COVID-19, globally economic downturn and ASF, the Company did a good job in pandemic prevention and at the same time fully implemented its business strategy that focused on three pillar business divisions in terms of feed and feed raw materials trade, broiler integration and hog raising, fully captured market changes and opportunities. While expanding feed business, it vigorously promoted white feather broiler integration and hog raising businesses. Relying on fully leveraging its strengths including brand, technology, R&D, marketing innovation and other aspects, the Company achieved high-quality and fast development in all business divisions, showing strong profitability and capability of withstanding risk. The Company's operating revenue and net profit attributable to shareholders have continued to grow for six consecutive years with record highs, and it was shortlisted into the Fortune China 500 in 2020.

#### 1. Business highlight

During the reporting period, the Company realized an operating revenue of RMB 9.848 billion with a year-on-year growth rate of 27.45%. Pre-tax profit reached RMB 762 million with a year-on-year growth rate of 65.25%, net profit attributable to the shareholders of the Company reached RMB 606 million, net profit attributable to the shareholders deducting non-recurring items reached RMB 603 million, respectively increased by 68.80% and 68.18% compared with the corresponding period of prior year. The weighted average return on equity reached 10.16%, net profit margin on sales reached 6.92% and comprehensive gross margin reached 10.58%, increased by 1.79 percentage points, 1.36 percentage points and 0.98 percentage points respectively over the same period prior year. Meanwhile, the period expense ratio decreased from 5.65% in the same period of prior year to current 4.15%. At the end of the reporting period, the Company's debt asset ratio was 32.31%, which has been lowered 40% since going public.

The main accounting data and financial indicators of the Company in the last three years

(2018-2020) from January to June present as follows:

## 2. Business review

### A. Feed business

In the first half of 2020, the Company fully leveraged its strengths as a leading player in terms of brand image and technology advantages to increase market exploration and continuously improve online and offline services, which have significantly heightened customer stickiness and market reach. Meanwhile, by constantly improved production efficiency and operating costs, the period expense ratio decreased by nearly 3 percentage points. During the reporting period, the Company's feed business realized a sales revenue of RMB 5.074 billion with a year-on-year increase of 50%.

Feed sales volume of the Company amounted to 1.64 million tons, increased by 41.96% compared with the same period of prior year. From the perspective of varieties, swine feed increased by 61%, among which high gross margin products in terms of creep feed, piglet feed in the nursery period and sow feed in the lactation period grew 76%, weaning piglet feed rose 72%, the percentage of these two kinds of feed respectively accounted for 26% and 50% of swine feed. Poultry feed increased by 38.61%, whilst ruminant feed grew 25.41%, among which beef cattle and mutton sheep feed increased by 62%. Aquatic

products increased by 7.61%. From the perspective of categories, compound feed realized a year-on-year growth rate of 43% and concentrated feed increased by 39%. From the perspective of regions, sales volume contributed by the regions in Northeast China increased by 51%, swine feed of which grew 102%, whilst the sales volume contributed by the regions in East, North, Central, South, Southwest and Northwest China rose by 46%. Overall, the Company's feed business in the first half year showed explosive growth, all the feed varieties realized progresses, especially for swine feed, which achieved a growth rate far beyond the average level of the industry.

#### **Feed sales volume in January-June 2020:**

Item	Jan.-Jun. 2020 (10k tons)	Jan.-Jun. 2019 (10k tons)	Year-on-Year Change
Swine feed	61.23	38.03	61.00%
Poultry feed	69.36	50.04	38.61%
Ruminant feed	26.11	20.82	25.41%
Aquatic feed	6.22	5.78	7.61%
Other feed	1.17	0.93	25.81%
Total	164.09	115.59	41.96%

#### **a. Technology powers progress deeply, researches on antibiotic-free early**

Facing the changing market and the new era of ABF, the Company actively upgraded and innovated products to constantly meet market demand. In response to ASF, it has successfully developed the line of products named "Wellhope Immune Nutrition", which have received higher recognition by farmers, whilst under the backdrop of historically higher hog prices, the Company has launched high-yielding and fast-growing products, also developed extra-large swine feed to meet the demand of raising over 120kg hogs in some areas, as well as upgraded fermented feed, etc., these marketable high quality products has won the favor of customers and gained the increase of market share. In terms of antibiotic-free feed, relying on leading technical team and research strength as well as by absorbing practices of De Heus, the Company has conducted unceasing explorations and hundreds' times of trials regarding ABF, by the end of June 2020, all products have been upgraded to antibiotic-free feed, all ABF schemes have been stable and received good feedback, which have further enhanced product competence.

**b. Implement precision marketing and innovate customer service system**

The Company has always paid close attention to customers and markets, implemented precision marketing strategies to constantly meet customers' personalized demands on products and services, which have enhanced its service and brand influence and significantly strengthened customer stickiness. For example, through in-depth cooperation with hog farms, bio-tech companies, insurance companies and other third parties, the Company provided customers with "one-stop" services, also timely adjusted the organizational structure of sales system, upgraded terminal service and marketing system to center on the key market and large-scale customers, as well as increased the promotion of new products and high-margin products.....In addition to precision marketing, the Company constantly innovated its customer service by strengthening online marketing and customer service, actively promoted marketing and service via live streaming, short video, WeChat and other tools. In the meantime, the Company has built online service platforms, which guided farmers by launching market analysis, management skills and solutions to epidemic prevention as well as online Q&A. Furthermore, its experts' team also organized online trainings for end customers, which have gained good recognitions.

**c. Guarantee production and supply and capture market opportunities**

After the outbreak of COVID-19, although facing the pressures in terms of labor shortage, panic buying of feed, dramatic increase in orders and traffic control, etc., the Company's feed plants resumed work quickly and all staff were dedicated to guaranteeing product manufacture and supply. In terms of purchasing, the Company gave full play to its advantages of large-scale purchasing and strategic partnership with suppliers, overcame difficulties to retain stable supply of raw materials while obtaining more competitive purchasing costs.

**d. Enlarge production capacity and quicken market layout**

To seize market opportunities to improve market reach and further expand feed business, the Company has vigorously upgraded feed manufacture equipment and warehouses to enlarge production capacity, also launched some new feed projects distributed in the provinces of Hainan, Shanxi, Shandong, Jiangxi, Hunan and other regions through self-built, mergers and acquisitions, leasing and OEM to speed up production capacity and market distribution, which has laid foundation for the rapid expansion of feed business.

## **B. Broiler integration business**

COVID-19 caused a sluggish domestic consumer demand that blocked sales channels, which greatly hit white feather broiler market. In respond to this, on the premise of ensuring the safety of employees, the Company resumed work quickly, steadily boosted business development. Although the operation performance of broiler integration business declined in the short term, it has been still one of the big contributors towards the Company's final profit, meanwhile, the core competence of broiler integration business has been constantly enhancing.

### **a. Accurately grasp market direction, scientifically and reasonably adjust production capacity**

In the first half year, the production capacity of breeders was expanded rapidly, which made the inventories of grandparent and parent stocks rise to high levels. In view of this, the Company moderately slowed down the construction progress of breeder farms, whilst strengthened existing farms' inside operation and improved growth performance of breeders to ensure the quality of day old chicks. For commercial broiler raising and slaughtering businesses, the Company chased short-term profit and long-term planning, steadily expanded production capacity in the provinces of Henan, Hebei and Shandong, etc. For food processing business, it rapidly developed new products to increase the sales volume, whilst vigorously explored domestic and foreign markets to unswervingly expand production and supply. From January to June 2020, the Company's holding and associated entities raised 257 million broilers with a year-on-year growth rate of 35%, totally slaughtered 265 million broilers, increased by 18%; produced 0.71 million tons of broiler parts products and 7,659 tons of prepared and cooked food, respectively rose by 26% and 28%.

### **b. Continue to deepen lean management, focus on strengthening team building**

In the context of the downturn of white feather broiler industry, the Company continuously deepened lean management in its broiler integration business, rationally reduced expenses and maintained efficient and smooth operation of each sector in the industrial chain. In terms of broiler raising, the Company took measures in certain aspects in terms of day old chick, feed production, animal health product and equipment to constantly improve the growth performance of commercial broiler and further heighten

automation. In terms of slaughtering, the Company continued to pay close attention to production efficiency to reduce operating costs and strengthen management quality, whilst it made efforts to improve the production capability of new projects to achieve profitability as soon as possible. In terms of finance, it strictly managed accounts receivable, reasonably arranged capital expenditure and quickened the inventory turnover to ensure enough cash flow. While strengthening internal management, the Company gave full play to its brand influence to actively absorb talents, optimized selection and training system, broadened talents reserve and echeloned talents team. As a result, the corporate culture has become increasingly rooted in staff's behaviors with continuously enhanced team cohesion.

**c. Actively optimize marketing strategy, firmly promote food strategy**

After the COVID-19 outbreak, domestic consumption was suppressed, whilst chicken demand fell. The Company responded quickly and courageously by vigorously expanding new sales channels to further explore domestic market, constantly optimizing product mix, developing new cost-effective product portfolio and persisting in cultivating excellent dealers and continuously improving their loyalty. At the same time, it continued to unswervingly promote food business strategy. Relying on the advantage of raw materials, utilizing multi-brand business model to rapidly develop domestic and foreign sales channels, expand sales volume and strive to improve the percentage of prepared food and high-value products as well as the export business, thus further improving the ecological niche. Influenced by the pandemic, foreign cooked food market also suffered great losses, the Company insisted on strict product quality, speeded up exploring foreign new customers and rapidly researched on new products according to new needs. Meanwhile, it dynamically adjusted production capacity and rapidly entered new channels to seize market share. From January to June 2020, the Company exported 1,442 tons of cooked food with a year-on-year growth rate of 83%.

**C. Hog raising business**

During the reporting period, each unit of the Company's hog raising business further strengthened prevention of ASF and COVID-19, seized market opportunities on the premise of ensuring safe production, took certain measures to constantly form the core competitiveness of hog raising business, including quickening business distribution,

attracting talents and heightening operation, etc.

**a. Speed up hog raising strategy, all projects move forward together**

In line with hog raising strategy, the Company, overcame many difficulties and captured market opportunities in terms of tight hog supply and higher hog prices to vigorously promote the increase of new production capacity contributed by existing hog projects, also strengthened internal operation to lower costs and increase efficiency. Meanwhile through constantly improved swinery structure and raising technology, some of its performance indicators, such as fattening period and feed-weight ratio, have reached advanced level nationwide. Meanwhile, the Company also made efforts to boost business in Central, East and North China, some newly-built projects located in the cities of Linzhou, Luoyang, Tongxu and Anhui province, etc., have been put into operation. Moreover, it quickened to increase production capacity by asset-light strategy in terms of cooperation, leasing and synchronizing breeder raising with farm construction. For the projects in Northeast China, the first phase of Fushun Shangnian breeder farm has been fully operated, its related production indexes have reached the first-class level in China; Fushun Guanmenshan breeder farm will sell piglets in August; Jilin Wellhope breeder base was rated as a Demonstration Farm of Jilin Modern Hog Industry by Jilin Animal Husbandry Bureau in March and began to sell piglets in July. In the first half year, hogs delivered by the Company's holding and associated entities amounted to 212,500 heads, including 63,200 heads of finisher, 114,900 heads of piglet (68,300 head sold inside the Company, 46,600 heads sold to the market) and 34,400 heads of breeders, increased by more than 30% over a year earlier. Benefiting from higher hog prices, hog raising business contributed a big part to the Company's profit.

Furthermore, the Company launched or planned breeder farms and finisher farms with different scales in Hebei, Henan, Southern Anhui, etc., also continuously developed suitable areas for hog raising during the reporting period. By doing this, the Company aims to rapidly increase the production capacity of breeders and enhance independent fattening. Besides, it also vigorously promoted the progress of new projects in Northeast China. Liaoning Lingyuan breeder farm began to construct in April, expected to be completed by the end of the year. New farms with different scales in Jilin province are expected to be put into use in the second half year. Hog integration project cooperated

with Aohan Banner people's government that will deliver 500,000 heads of hogs per year is expected to build in August this year. By the end of June, the Company's inventories of sow reached 54,000 heads, over 5 times increase compared with the same period of prior year, and it is expected to stock more than 60,000 heads of sows by the end of the year (holding and associated companies included).

**b. Strictly prevent epidemics to ensure production safety**

Along with doing good job of preventing epidemics, the Company increased input in bio-safety control, continuously upgraded equipment and facilities to further safeguard farms. All the farms optimized bio-safety control system and operation procedures as well as carried out all-round supervision through cameras, patrol inspection and other means. At the same time, the farm's decontamination centers strictly set up a three-level system to comprehensively clean vehicles and materials close to the farm, whilst the professional testing center conducted defensive tests inside and outside the farm to ensure production safety. The Company has also continuously improved its support for contract farms about epidemic prevention, provided them comprehensive guidance and services, such as equipment optimizing, safe material supply, herd management, feeding program, ASF monitoring and professional support teams, to support farmers raise hogs safely in closed environment.

**c. Enter hog slaughtering and further processing to complete the value chain**

Chifeng Wellhope Fuxinyuan Slaughtering Company, a holding entity of the Company, actively expanded distribution channels, its hog parts products have been mainly sold to different channels, universities, enterprises and first-tier cities, etc. Meanwhile, this company also has been storing national reserved meat. In addition, the Company has continuously broadened its value chain. It is going to build a hog slaughtering and further processing project in Anhui province, which is expected to start construction in August. Through entering slaughtering and food processing, the Company's hog integration chain will be further improved to heighten risk resistance and stabilize profit contribution.

**d. Strengthen expertise improvement and talents reserve to promote the sustainable development**

The Company further strengthened professional knowledge trainings in the field of bio-safety, breeding system and feeding program by video conference and external

exchanges. Meanwhile, based on breeder farms located in different areas, the Company cultivated talents to its hog farms also reserved excellent talents via internal selection and external recruitments, etc. In terms of talent incentive, it continued to optimize the performance appraisal mechanism and tried to innovate the incentive model of hog integration to attract and retain talents rapidly under the favorable situation of hog business.

#### **D. Feed raw material trade**

Benefited from market quotation and IT application, the Company's trade business achieved a substantial growth. Feed raw materials presented a short supply in the first half of this year caused by certain factors, such as, those raw material producers resumed work slowly, feed producers expanded production capacity, whilst imported raw materials represented by fish meal were lack of supply, etc. Together these reasons drove up the prices of raw materials. The Company seized these market opportunities and achieved a significant growth in feed raw materials trade business. In terms of animal health product, the Company, as the agent of top brand animal health products both domestic and overseas, realized a year-on-year growth rate of over 30% in this business supported by a high prosperous market of high-end animal health products in the first half year. While enjoying the favorable market, the Company leveraged the advantages of IT application platform to timely and accurately analyze data and research on market, conduct forward-looking analysis and accurate marketing management, which has made the operation of the Company's trading business safer and more efficient and further amplified the profitability.

### **3. Technology Innovation**

In the first half of 2020, regardless of the pressures from market demands and competitions, such as the sporadic outbreak of ASF and ban of antibiotics in feed, the Company's R&D team has further enhanced the competitiveness of products and on-site farming technology by selecting new raw materials, applying new technologies and optimizing formulation. Meanwhile, the Company has proactively established a new antibiotic-free system and popularized the application of antibiotic-free achievements to strengthen marketing and create values.

## **A. Well prepared to step into the new era of antibiotic free confidently**

Feed industry has been in the new era of antibiotic free since July 2020. By adhering to the mission of "protecting environment, providing food security and benefiting the society", the Company has been preparing and researching on antibiotic-free feed for a long time and carried out more than 100 experiments from 2013 and 2019 based on own technology accumulation and practices of the partner Royal De Heus.

Feeds for layers in laying period, ruminants, duck and aquaculture have been already antibiotic free for a time and feed for white feather broiler has realized antibiotic free for three years. Whilst in the past two years, the Company has done a lot of trials in order to guarantee the effectiveness of antibiotic-free feed for swine. For this purpose, it paid attention to the selectiveness of feedstuffs, feed formulation design, feed processing technology and evaluation of feed additives. In the first half of 2020, the R&D team actively transformed the achievements of ABF into the field of swine feed, established the Wellhope's technical system of "antibiotic-free nutrition", and made multiple technical schemes for cost-effective antibiotic-free feed formulation. The Company also applied related products in the trial farms and some regional markets, which have been proved to reach the goal of balanced nutrition, stability, easy digestibility, healthy animal bodies, strong immunity and anti-stress capacity, thus the Company has successfully achieved ABF for all series of swine feed products. By the end of June 2020, Wellhope has ungraded all products to ABF, which have realized constant growth performance and good customer feedback.

## **B. Dedicate to heightening R&D to improve products competitiveness**

a. Swine feed: The Company strengthened those targeted products, such as fast-growing feed and extra-large swine feed (over 120kg), to meet the needs of customers quickly. At the same time, the new antibiotic-free products such as bio-fermented feed have been developed to facilitate the successfully transition of antibiotic-free feed on the farm and enhanced the health of herds; Meanwhile, the Company has established the nutrition standards and feeding strategies for swine with different strains and optimized the mix and quality of high value products, which boosted the significant growth of the sales volume of piglet feed in the nursery phase.

b. Broiler feed: The Company continued to increase the input in the researches on

broiler diet and nutrition selection, also boosted the application of feeding model as pellet-powder-pellet, focused on improving broiler's growth performance and slaughtering quality, which maintained the technical advantages of broiler feed.

c. Layer feed: The Company constantly improved the manufacturing technique and performance of fermented feed to further improve the economic benefits of farmers, also enlarged the development of fermented feed for quail and goose. Meanwhile, the Company has been dedicated to creating organic Wellhope brand eggs, at present, it has launched lutein eggs, selenium-enriched eggs, DHA eggs and other functional eggs, which laid a foundation for developing layer integration business.

d. Ruminant feed: The Company designed anti-stress solutions for lamb during the transition period, which helped the lambs more easily adapt to the mode of being fed ad libitum. This technology obviously prevented the occurrence of diarrhea and decreased the mortality and thus increased the profit of finishing lamb in general. Meanwhile the compound feeds for lambs and calves were also developed with the aim to better the performance of young animals. The occurrence of kidney stone in lamb finishing has been decreased to be lower than 1% by improving the compound through animal feeding experiments on farm. This was very helpful to gain more profit for lamb finishing. For dairy feed, the new compound was designed for the fresh cows according to the starch plus sugar concept, which was proved to increase the daily milk production by 1 to 2 kg and help to stabilize the rumen pH value by lower starch content and to improve the health of cows and as a result to longer the duration of lactation peak and milk production as well as height body health.

e. Aquatic feed: The Company developed high-quality fingerling fish feed and designed the programs of animal health products to improve the livability of fry and the economic benefits of aquaculture. At the same time, utilizing own technical advantages and applications in the fermented feed, the Company launched fermented aquatic feed to improve the intestinal health of animals and the water quality of the pond; it also upgraded special aquatic feeds continuously and determined the nutrition standard and formula model for different varieties under different farming modes, meanwhile, with the upgrading of equipment and technology, the difficulties in the growth, stimulating feeding and processing of special aquatic feeds have been solved.

## **C. Constantly upgrade raising techniques to strengthen the competitiveness of the Company**

### **a. Broiler raising techniques**

In the broiler farms, the Company continued to improve the nutrition programs for breeders and the bio-safety to comprehensively enhance the performance of commercial day old chicks. Through continuously improved on-site raising management and scientific feeding mode, feed conversion ratio and animal growth potentiality have effectively increased with reduced mortality and culling rate. Meanwhile, the Company has made dramatic breakthroughs in raising broilers via cage. The automatic micro-environmental control technology and the broiler growth performance have reached national top level; the original ventilation mode and solar energy technology reduced air pollution. In addition, the Company cooperated with numerous universities and research institutes. By means of the necropsy, laboratory diagnosis and drug sensitivity test, veterinarians can detect and treat diseases in time. Relying on the guideline of the complete bio-safety system, company-owned farms and contract farms have fulfilled strict measures in terms of disinfection, vaccination, quarantine, etc., to guarantee that the broilers can have a good performance.

### **b. Hog raising techniques**

The Company has established a high-efficiency and dynamic management system for the whole process of hog raising, which integrated the dynamic formula nutrition technology, large-scale feeding technology and full-system database of hog raising. At present, it has created a "3-stage" gilt feeding mode and a "5430" high-efficient and grain-saving feeding mode for the sows and piglet, and "7-stage" feeding mode for growing-finishing hog, and continuously provided company-owned farms and contract farms with systematically nutritional management programs through data collection and analysis, effect tracking, etc. By far, the Company has established a database platform for fattening hogs, formed more than 20 standard documents, rules and regulations, management plans, etc., and formulated 3 corporate standards, 1 set of feed product manuals, 1 set of new processing technology and 2 sets of new feeding modes, launched a new product specialized for extra-large pigs (over 120kg), applied for 1 invention patent, 1 scientific research project and published 10 papers.

#### **D. Attract and reserve technical talents via multiple ways to improve the overall competitiveness of the technical team**

The Company has continued to strengthen the attraction and reserve of key technical talents through a variety of methods. In the first half of the year, it recruited nearly 20 doctors and masters through various channels, meanwhile, it further strengthened trainings for R&D team through internal training, external communication and high-frequency technical communication with Royal De Heus, which enabled the Company to always keep eyes on the world's latest technological trends, research results and maintain its leading position of know how. In addition, the Company held "Wellhope Cup" postgraduate research paper competition to discover talents and excellent research directions and ideas, also to build a bridge between theoretical research and practice, promoting technological innovation and breakthroughs in the agriculture and animal husbandry industries.

### **II. Analysis of primary business**

#### **1. Analysis of related items in the financial statements**

RMB

<b>Item</b>	<b>January-June, 2020</b>	<b>January-June, 2019</b>	<b>Change %</b>
Operating revenue	9,848,379,852.28	7,727,400,004.75	27.45
Operating costs	8,806,688,412.71	6,985,820,614.94	26.07
Sales expenses	212,669,710.62	239,990,725.07	-11.38
Administrative expenses	134,081,626.60	126,915,965.17	5.65
Financial expenses	31,065,360.72	39,721,751.73	-21.79
R&D expenses	30,944,918.31	30,021,345.87	3.08
Net cash flow from operating activities	451,396,027.78	299,291,784.62	50.82
Net cash flow from investing activities	-611,726,432.66	-378,785,068.92	not applicable
Net cash flow from financing activities	261,794,505.53	679,776,007.24	-61.49

Explanation for the change of operating revenue: feed product sales revenue grew.

Explanation for the change of operating cost: feed product sales cost grew.

Explanation for the change of sales expenses: due to implement the new revenue standards, freight expenses of related products were adjusted to operating cost.

Explanation for the change of administrative expenses: the remuneration for managers grew.

Explanation for the change of financial expenses: interest on deposit increased and interest on borrowing decreased.

Explanation for the change of R&D expenses: expenses for R&D materials and instruments increased.

Explanation for the change of net cash flow from operating activities: cash received from sales of products increased compared to the same period of prior year.

Explanation for the change of net cash flow from investing activities: cash paid for investment and for acquiring and building fixed assets, intangible assets and other long-lived assets increased.

Explanation for the change of net cash flow from financing activities: cash paid for debt increased.

## 2. Assets and liabilities

RMB

Item	June 30, 2020	Percentage of total assets %	June 30, 2019	Percentage of total assets %	Year-on-year change %	Explanation
Trading financial assets	100,000,000.00	0.96	0.00	0.00	not applicable	purchases of structural deposits increased

### III. Other Disclosures

#### 1. Possible risks

##### A. Risks of fluctuations in raw material prices

Most costs of the feed business come from raw materials. Factors in terms of production changes in producing areas, import policies, purchasing and storage and grants, exchange rate fluctuations, logistics costs, etc., may trigger fluctuations in the raw material market, which will affect the Company's feed business costs and gross profit margins. With deepened globalization of the trade of agricultural products in recent years, the supply-demand relationship and trading price of raw materials have been affected by market conditions such as spot and futures at home and abroad, and the price trend has become more complex followed by increasingly fierce fluctuations, which further increases the difficulties of the Company's cost management. In addition, the fluctuations of COVID-19, Sino-US trade relations, international political and economic environment and other factors have also made the purchase price of raw materials more variable.

##### **Solutions:**

- a. The Company has established strategic partnerships with many top domestic and foreign raw material suppliers, and strategically reduced purchasing costs through three-level purchasing mode in terms of head office centralized purchasing, regions' price compare purchasing and local departments' purchasing of different varieties.
- b. IT combines its raw material trading business with purchasing management, i.e., the professional and practical raw materials' purchasing team conducts targeted forward-looking researches and real-time tracking on the market, makes great efforts to reduce the purchasing price, such as uniformly managing different varieties, adopting spot purchasing and futures together.
- c. The purchasing team works closely with the R&D team to further optimize the purchasing cost by way of re-formulating the feeds i.e., changing the composition of the feed to use cheaper alternative raw materials while achieving the same results, which can further optimize purchasing costs.
- d. The Company and Royal De Heus have set up an information sharing channel, which enables the two sides to timely share the market trends of raw materials and additives, etc. In addition, the two sides may carry out joint purchasing cooperation in the future, which

will greatly enhance the overall bargaining power.

### **B. Risks of fluctuations in livestock and poultry prices**

Animal husbandry industry is a typical cyclical industry and the hysteretic adjustment of supply causes the prices fluctuating periodically. At present, China's animal husbandry industry is still dominated by back yard farms and small-scale farms, these farm owners show the character of non-rational decision-making with an obvious “herd effect”, which further aggravates the cyclical fluctuations in the market price.

#### **Solutions:**

- a. In terms of strategy, while steadily developing feed and feed raw materials trade businesses, the Company has increased its input in broiler integration business and quickened the expanding of hog raising business to create an operating model powered by broiler and hog integration businesses, which can effectively reduce the risks brought by the cyclic fluctuations in the industries.
- b. In terms of business, the Company's broiler integration business has established an industrial chain, whilst in 2019 it also extended hog raising business to the downstream industries, now the slaughtering business has been operated well. The continuously improved industrial chain structure enables the price fluctuation of each sector to be fully hedged, to maximize the price fluctuation of the whole industrial chain.
- c. In terms of management, the Company has always been committed to improving the production standard and operation model of each business sector, reducing overall operating costs by optimizing the production indicators and improving per capita efficiency. Costs advantage can mitigate the negative impacts of downward industry on the Company while improve the overall profitability when facing a booming market.

### **C. Risks of serious animal disease**

Feed and animal raising are the Company's two core businesses. Disease outbreak is one of the main risks faced by animal raising companies. Once a disease happens, it will cause panic in the market, which will reduce the demands, then lessen the production and incomes as well as increase costs. The feed industry mainly serves downstream animal raising industry; thus, the downstream market will directly affect the performance of feed business. As an unpredictable emergency, an explosive disease will undoubtedly have a strong impact on the Company's operations.

**Solutions:**

- a. The Company attaches great importance to regional distribution and business structure, which is the most direct way to divert the risk of epidemic.
- b. It continues to improve the prevention technology of major epidemics, completes the early warning system and strives to control epidemics effectively before spreading.
- c. When the epidemic comes, the speed of response is particularly critical, the faster to response, the less to loss. The Company has set an emergency command system for major epidemics to minimize losses when they occur.
- d. The Company has constantly strengthened the analysis and research capabilities for major epidemics, enhance animal's immunity from the perspective of animal nutrition and veterinary services.
- e. For ASF, the Company has formed a relatively complete prevention system from product researches to farm management. Specific prevention measures detailed in Section IV hereof-Hog Raising Business.

**D. Risks of the industrial pattern adjustment caused by environmental protection policies**

China has put forward some environmental protection regulations in recent years, such as *Environmental Protection Tax Law*, etc., which show the government's determination to increase supervision on environmental protection in animal husbandry industry, whilst the local governments have also issued certain new regulations. It can be seen that the continuously strengthened environmental protection is the trend of the industry also an inevitable reality, which will further weed out unqualified players and reshuffle the industry.

**Solutions:**

During the start-up period, the Company had input "Save Resources, Committed to Environmental Protection" as part of its Vision. During the past 25 years, the Company has always considered saving resources and protecting the environment as its important mission, taken strict compliance with laws and regulations and implementation of environmental protection requirements as key performance appraisal indicators for managers.

- a. Regarding to raising and slaughtering, in the face of increasingly strict environmental

protection requirements, the Company have comprehensively identified environmental risk points and formulated emergency plan for environmental emergencies so as to maintain the stable operation. For the key pollutant discharge plants, the Company has developed a complete self-monitoring program, which can find problems to repair, eliminate hidden dangers in a timely manner. Meanwhile, it also deploys more resources and manpower to ensure these plants always complying with national standards.

b. Regarding to feed production, the Company has always implemented national environmental protection standards with the most rigorous attitude, established complete control measures for waste gas, noise, wastewater, solid waste and other pollution generated during the production process. Moreover, it uses eco-friendly raw materials and additives in feed formulations and continuously develops safe diet to reduce the emissions of heavy metals, nitrogen and phosphorus.

#### **E. Risks of exchange rate fluctuations**

The Company's international business started early and developed rapidly, the exchange rate fluctuations have released great influence on raw material purchasing, product export and overseas investment, presenting as follows: Firstly, international development has made the global purchasing of raw materials becoming normally, therefore, the risks of exchange rate fluctuations are particularly evident in the raw materials that are based on oversea supply. Secondly, the Company's export business of broiler parts products is growing rapidly with customers from many countries and regions across the world, and the exchange rate fluctuations are inevitably caused by the settlements of multiple currencies. Finally, due to the large overseas investment and overseas operations, the cross-border capital transactions and settlements will also be affected by exchange rate fluctuations.

#### **Solutions:**

a. The Company closely focus on the dynamic international foreign exchange market, whilst enhances the awareness of foreign exchange risk and improves the researching and forecasting capabilities of the foreign exchange market.

b. The Company continues to improve the bargaining power in foreign trade transaction by enhancing the competitiveness of products and using RMB for settlement, reduce the exchange rate risks by adding insured value clause and the exchange rate risk allocation

clause in the contract.

c. By making full use of foreign exchange forwards, swaps and options (combination) and other instruments to maintain the exchange rate for foreign exchange exposure.

d. According to specific conditions of different countries, based on the principle of "using foreign currencies in foreign trade", the Company reasonably matches the income and debts to control the exchange rate risks.

#### **F. Risks of food safety**

In recent years, there have been some food safety incidents in China, which affected consumers' confidence in food safety. China has continuously improved the legislation on food safety and food sources, conducted forceful measures on handling food violations. Once the food safety incident happens, it will directly damage the interests of consumers and cause panic, which may greatly impact the downstream demand and affect the brand and performance of the enterprises.

#### **Solutions:**

a. Regarding to feed business, the Company has established a three-level quality management mechanism and testing system, which consists of headquarters, regions and local departments, adopted ISO 9001, ISO 22000, ISO-IEC 17025 and other international standards, thoroughly implemented a series of quality standards to realize the whole process control of products and established the traceability system. The Company works hard to popularize near-infrared detection technology to improve detection efficiency and share data in time, by doing this, it can quickly realize risk warning and monitor heavy metals, harmful microorganisms and mycotoxins, providing an important guarantee for feed products. In addition, by drawing on the experiences of European antibiotic-free feed, and basing on current situation in China, the Company has realized significant progresses in antibiotic alternatives, at present, all the Company's feed products have stepped into antibiotic free.

b. Regarding to broiler integration business, the integrated operation can ensure the ample supply of raw materials and strictly control the whole process from feed production, broiler rearing, slaughtering, raw meat and food processing. Through standardized management and streamline operation, it can integrate bio-safety, drug residue control and in-process hygiene to achieve food safety traceability.

## Section V Important Disclosures

### I. Shareholders' Meeting Convened during the Reporting Period

Meeting	Date	Website designated for disclosing the resolution	Resolution disclosing date
2019 Annual Shareholders' Meeting	April 20, 2020	www.sse.com.cn	April 21, 2020

Explanation of related party transaction		The Company and its associated companies know each other better and have maintained long-term cooperation relationships, which can strengthen the trust of products produced by partners, reduce transaction cost, improve working efficiency and avoid trading disputes. Meanwhile, purchasing raw materials from related parties can ensure the quality. Moreover, by participating in the management and exerting influence on related companies can help them to maintain a long-term and stable supply, also help them reduce the marketing pressure. The purpose of conducting related party transactions is to satisfy the needs of the Company's production and operation, the purchasing or selling price is determined according to the market price of similar products. Such transactions do not violate relevant laws, Company Constitution, etc., and do not damage the rights and interests of shareholders.				

## IX. Anti-poverty Project of the Company

### 1. Targeted poverty alleviation

The 19th National Congress of the Communist Party of China has put forward to take targeted poverty alleviation as one of the three major challenges that must be fought to secure a decisive victory in building a moderately prosperous society in all respects. The year 2020 will be a decisive year to win the battle against poverty and to finish building a moderately prosperous society in all respects. Driving by the principle of contributing to the society, the Company positively responded to the call and requirements of the Party Central Committee and the government at all levels to vigorously contribute to targeted poverty alleviation.

### 2. Overview of targeted poverty alleviation

In response to the call of Lankao County Party Committee and county government, Lankao Duck Company, one of the Company's associated companies, launched a duck integration project targeted poverty alleviation in Lankao County, which implements the operating model of rearing ducks by company and contract farms. In line with the principle of mutual benefit, Lankao Duck signs contracts with farmers and adopts unified supply of ducklings, feed, medicine, technical service and repurchasing, farmers are not required to prepare working capital. In the first half of 2020, Lankao Duck offered 784 contracts to local farmers and repurchased 8.57 million ducks with direct expenditure of RMB 5.11 million.

### 3. Figures of targeted poverty alleviation

RMB 10k

Index	Details
1. Overall	
including: funds for poverty alleviation	12.75
A. In details	
Targeted poverty alleviation	12.75

### 4. Progress of targeted poverty alleviation

In the first half of 2020, faced with the impact of COVID-19, Lankao Duck not only ensured the supply of materials, also heightened the service and support for farmers and provided comprehensive trainings and guidance to improve their breeding techniques. By the end of the reporting period, the farmers achieved an average profit of RMB 2.0 per duck, making good profits.

## 5. Follow-up targeted poverty alleviation

On June 16th, 2019, the Company signed a strategic cooperation agreement with Tai'qian County People's Government of Henan Province, one of the nationally designated poor counties. The two parties will build high-level production base of white feather broiler integration, the Company will also help farmers to relieve financial pressure and increase income according to local targeted poverty alleviation policies.

The Company will continue to focus on agriculture-related poverty alleviation projects, assist in cultivating talents, providing job opportunities and increasing income of farmers. Meanwhile, it will give full play to its advantages to integrate resources and contribute to the goal of building a moderately prosperous society in all respects.

### X. Environmental Protection Policy

#### 1. Information of pollution discharge

Puyang Wellhope Food Co., Ltd. (hereinafter referred to as "Puyang Wellhope"), one of the subsidiaries of the Company, has been listed as a company with sewage & gas waste emission of Puyang City, Dalian Zhongjia Wellhope Food Co., Ltd. (hereinafter referred to as "Zhongjia Food") and Dalian Huakang Xinxin Food Co., Ltd. (hereinafter referred to as "Huakang Food"), subsidiaries of the Company, have been listed as an entity with sewage & gas waste emission of Dalian City, Kaifeng Wellhope Meat Food Co., Ltd. (hereinafter referred to as "Kaifeng Wellhope"), one of the subsidiaries of the Company, has been listed as an entity with sewage waste emission of Kaifeng City. Shenyang Huakang Broiler Co., Ltd. (hereinafter referred to as "Shenyang Huakang"), one of the subsidiaries of the Company, has been listed as an entity with sewage waste emission of Shenyang City, Pingyuan Wellhope Food Processing Co., Ltd. (hereinafter referred to as "Pingyuan Wellhope"), one of the subsidiaries of the Company, has been listed as an entity with sewage & gas waste emission of Handan City, Changchun Wellhope Food Co., Ltd. (hereinafter referred to as "Changchun Wellhope"), one of the subsidiaries of the Company, has been listed as an entity with sewage & gas waste emission of Changchun City; Chifeng Wellhope Fuxinyuan Co., Ltd. (hereinafter referred to as "Chifeng Wellhope"), one of the subsidiaries of the Company, has been listed as an entity with sewage & gas waste emission of Chifeng City. Details are presented as follows:

Puyang Wellhope: The main pollutants include waste gas and waste water, among which

waste water mainly contains COD, ammonia nitrogen, total phosphorus, pH, suspended solids, biochemical oxygen requirement, animal and plant oil, total coliform and total nitrogen. The waste gas mainly contains SO<sub>2</sub>, nitric oxide and particulate matter. Emission method: 1 waste water emission outlet for sewage treatment located in the southeast corner of the sewage monitoring station, 1 waste gas exhaust outlet distributed in the boiler room in the northeast corner of the plant. Puyang Wellhope strictly implements the Discharge Standard of Water Pollutants for Meat Processing Industry (GB 13457-1992) with the emission permit (9141092367412881xt001p) and the indirect emission limit in the water inflow agreement of Nanle County Sewage Treatment Co., Ltd, as well as follows the requirements of Boiler Air Pollutant Emission Standard and emission permit (9141092367412881xt001p). During the reporting period, the discharged pollutants amounted to 2.1756 tons of COD and 0.11254 tons of ammonia nitrogen controlled within the permitted scope, and the "three wastes" treatment met the requirements without exceeding the standards.

Kaifeng Wellhope: The main pollutant is waste water, which mainly contains COD, ammonia nitrogen, total phosphorus, pH, suspended solids, biochemical oxygen requirements, animal and plant oil, total coliform and total nitrogen. Emission method: 1 waste water emission outlet for sewage treatment located in the east corner of the plant. Kaifeng Wellhope strictly implements Level 2 standard of Discharge Standard of Water Pollutants for Meat Processing Industry (GB 13457-1992) with the emission permit (91410212MA4057G88A001R) and the sewage emission limit of No. 2501 Environmental Evaluation Criteria. During the reporting period, the discharged pollutants amounted to 3.52 tons of COD and 0.72 tons of ammonia nitrogen controlled within the permitted scope, and the "three wastes" treatment met the requirements without exceeding the standards.

Zhongjia Food: The main pollutants include waste gas and waste water, among which waste water mainly contains COD, ammonia nitrogen, total phosphorus, pH, suspended solids and total nitrogen. The waste gas mainly contains SO<sub>2</sub>, nitric oxide and particulate matter. Emission method: 1 waste water emission outlet for sewage treatment located in the west side of the new sewage treatment workshop, 1 waste gas exhaust outlet distributed on the roof of the boiler room. Zhongjia Food strictly implements the local

level of Integrated Wastewater Discharge Standard of Liaoning Province, DB 21.1627-2008 and follows the Boiler Air Pollutant Emission Standard for waste gas emission (GB 13271-2014). During the reporting period, the discharged pollutants were controlled within the permitted scope, the government did not require the total amount of pollutant discharge of Zhongjia, its "three wastes" treatment met the requirements without exceeding the standards.

Shenyang Huakang: The main pollutant is waste water, which mainly contains COD, ammonia nitrogen, pH, suspended solids, total phosphorus and total nitrogen. Emission method: 1 waste water emission outlet for sewage treatment located in the northeast of the sewage treatment station. Shenyang Huakang strictly implements level 3 standard of Integrated Wastewater Discharge Standard of Liaoning Province and the gas emission follows Boiler Air Pollutant Emission Standard (GB13271-2014). During the reporting period, the "three wastes" treatment met the requirements without exceeding the standards.

Huakang Food: The main pollutants include waste gas and waste water, among which waste water mainly contains COD, ammonia nitrogen, total phosphorus, pH, suspended solids and total nitrogen, water gas mainly includes SO<sub>2</sub>, nitric oxide and particulate matter. Emission method: 1 waste water emission outlet for sewage treatment located in the southeast corner of sewage treatment workshop and 1 waste gas exhaust outlet distributed on the roof of the boiler room. Huakang Food strictly implements the local level of Integrated Wastewater Discharge Standard of Liaoning Province, DB 21.1627-2008 and follows the Boiler Air Pollutant Emission Standard for waste gas emission (GB 13271-2014). During the reporting period, the discharged pollutants were controlled within the permitted scope, and the "three wastes" treatment met the requirements without exceeding the standard.

Pingyuan Wellhope: The main pollutants include waste gas and waste water, among which, the waste water mainly contains COD, ammonia nitrogen, suspended solids, BOD<sub>5</sub> and animal and plant oil, the waste gas mainly contains SO<sub>2</sub>, nitrogen oxide and smoke. Emission method: 1 wastewater discharge outlet for sewage treatment distributed at the entrance of sewage monitoring station in the northeast corner of the plant, 3 waste gas exhaust outlets distributed in the east side of the boiler room. Pingyuan Wellhope strictly

implements the wastewater discharge standard of Meat Processing Industry (GB 13457-1992) and Level 2 Discharge Standard of Livestock and Poultry Slaughtering and Processing (emission permit 91130423MA07LFUD6B001Q) and inlet water quality requirements of Linzhang County. Exhaust gas emission implements the Boiler Air Pollutant Emission Standard (GB 13271-2014) with the emission permit (91130423MA07LFUD6B001Q). During the reporting period, the discharged pollutants were controlled within the permitted scope without exceeding the standards.

Changchun Wellhope: The main pollutant is waste water, mainly containing COD, ammonia nitrogen, total phosphorus, pH, suspended solids, biochemical oxygen demand, animal and plant oil, total coliform, total nitrogen. Emission method: 1 waste water discharge outlet for sewage treatment located at Xiajiadian Street, Dehui City. Changchun Wellhope strictly implements Level 2 standard of Pollution Discharge Standard of Meat Processing Industry (GB 13457-1992) with the emission permit (91220183MA13WF2K34001Y). During the reporting period, the discharged pollutants amounted to 3.52 tons of COD and 0.72 tons of ammonia nitrogen, both of which were controlled within the permitted scope and the treatment of "three wastes" met the requirements without exceeding the standards.

Chifeng Wellhope: The main pollutants include waste gas and waste water, among which waste water mainly contains COD, ammonia nitrogen, total phosphorus, pH, suspended solids, biochemical oxygen demand, animal and plant oil, total coliform group and total nitrogen. Emission method: equipped with wastewater outfalls located in the south of the company's sewage monitoring station. Chifeng Wellhope strictly implements the Discharge Standard of Water Pollutants for Meat Processing Industry (GB13457-1992). It also built a waste gas discharge outlet located in the harmless treatment workshop, which adopts the air pollutant emission standard GB16297-1996 and the odor pollutant emission standard GB14554-93. During the reporting period, the discharged pollutants amounted to 0.92 tons of COD emissions and 0.034 tons of ammonia nitrogen, both of which were controlled within the permitted range.

## **2. Circumstance of building and operating pollution control facilities**

Puyang Wellhope:

a. Sewage treatment: Puyang Wellhope has a 2000-tons-per-day sewage treatment station, which adopts the treatment process of "pretreatment-oil separation-A2O -disinfection" to

treat the wastewater. Its environmental protection facilities are running normally, and the pollutant emission indexes all meet the required standards.

b. Waste gas treatment: Gas generated by the waste water pool of the sewage treatment station is collected and purified by activated carbon adsorption and then discharged through the 15-meters-high chimney in accordance with related standard; the traditional coal-fired boilers are replaced by gas-fired boilers, and all kinds of pollutants meet the emission standards.

Kaifeng Wellhope:

Sewage treatment: Kaifeng Wellhope has a 1500-tons-per-day sewage treatment station, which adopts the treatment process of "air floatation-A2O" to treat the wastewater. Its environmental protection facilities are running normally, and the pollutant emission indexes all meet required standards.

Dalian Zhongjia:

a. Sewage treatment: Zhongjia Food has a 1200-tons-per-day sewage treatment station, which adopts the treatment process of "mechanical barrier-oil separator-regulation pool-hydrolysis pool- catalytic oxidation pool-sedimentation pool-sand filter" to treat the wastewater.

b. Waste gas treatment: Dedusting smoke and dust by wet method and conducting desulfurization by magnesium oxide. Discharging gas by a 25-meters-high chimney to has effectively met related standards.

Shenyang Huakang:

Sewage treatment: Shenyang Huakang has a 2220-tons-per-day sewage treatment station, which adopts the treatment process of "pretreatment- oil separation-A2O-disinfection" to treat wastewater. Its environmental protection facilities are running normally, and the pollutant emission indexes have reached all required standards.

Huakang Food:

a. Sewage treatment: Huakang Food has 900-tons-per-day and 300-tons-per-day sewage treatment stations that adopt the treatment process of "mechanical barrier-oil separator-regulation pool-air flotation- hydrolysis pool-A2O-sedimentation pool-advanced treatment -sand filter-clean water pool", which can achieve required standards.

b. Waste gas treatment: Dedusting the smoke and dust by wet method and conducting

desulfurization by magnesium oxide. Gas emission meet all required standards.

Pingyuan Wellhope:

- a. Sewage treatment: Pingyuan Wellhope has a 1000-tons-per-day sewage treatment station, which adopts AO treatment process to dispose wastewater. Its environmental protection facilities are running normally, and the pollutant emission indexes have reached all required standards.
- b. Waste gas treatment: Gas generated by the waste water pool of the sewage treatment station is collected and purified by activated carbon adsorption and then discharged through the 15-meters-high chimney in accordance with related standard; the traditional coal-fired boilers are replaced by gas-fired boilers with low carbon, all kinds of pollutants meet the emission standards.

Changchun Wellhope:

Sewage treatment: Changchun Wellhope has a 1000-tons-per-day sewage treatment station, which adopts AO treatment process to dispose wastewater. Its environmental protection facilities are running normally, and the pollutant emission indexes have reached all required standards.

Chifeng Wellhope:

- a. Wastewater treatment: At present, Chifeng Wellhope has invested RMB 20 million to build a sewage treatment plant that can treat 2,400 tons of wastewater per day, and invested RMB 34 million to construct biogas project with a daily output of 8000 m<sup>3</sup>, which can ferment waste water and manure, etc., produced biogas can be used for boiler production, biogas residue and slurry used as fertilizer to grain.
- b. Waste gas treatment: Chifeng Wellhope has taken certain measures to lessen the waste gas, such as, stop feeding hogs and broilers when enter the plant and slaughter the animals on the same day, wash the houses in time, build closed waiting houses and install fan exhaust to enhance ventilation.

### **3. Environmental impact assessment of construction projects and other administrative permits for environmental protection**

During the reporting period, all the construction projects of the Company met the requirements of environmental impact assessment and other environmental protection

administrative licenses. The Company has strictly implemented related environmental protection requirements.

#### **4. Emergency plan for environmental incident**

According to the requirements of environmental protection authorities and relevant laws and regulations, each plant of the Company has identified the site with potential environmental risk and formulated the emergency plans for environmental incident; meanwhile, related companies conducted emergency exercises to improve self-help capability and continued to identify the hidden danger to ensure normal operations.

#### **5. Self-monitoring program for environment**

In accordance with requirements of self-monitoring environment and information disclosure, the pollutant discharging entities of the Company have formulated self-monitoring programs to monitor environment and disclose information as scheduled.

## Section VI Changes in Common Shares and Shareholder Information

## VI. Tax

### 1. Categories of taxes and tax rate

Categories	Taxation basis	Tax rate
Value-added tax	Output VAT--deductible input VAT	1%,3%,6%,9%,10%,11%,13% (VAT on sales)
Urban maintenance and construction tax	Turnover tax payable	1%,5%,7%
Corporate income tax	Income tax payable	15%,20%,25%
Extra charges of education funds	Turnover tax payable	3%
Extra charges of local education funds	Turnover tax payable	2%

## VII. Notes to the Items of Consolidated Financial Statements

### 1. Monetary capital

RMB

Item	Closing balance	Opening balance
Cash on hand	1,578,403.58	693,912.75
Cash at bank	1,608,286,328.48	1,507,696,568.93
Other monetary capital	12,326,484.47	46,390,842.45
Total	1,622,191,216.53	1,554,781,324.13
including: total amount of funds deposited abroad	2,912,302.09	719,833.99

Other explanation:

Pledged deposits of letter of credit included in other monetary capital was RMB 1,141.97, futures margin was RMB 12,325,342.50 in the end of the period.

### 2. Trading financial assets

RMB

Item	Closing balance	Opening balance
Measured at fair value and whose changes are booked into current profits and losses	100,000,000.00	40,000,000.00
Wealth management products	100,000,000.00	40,000,000.00
Total	100,000,000.00	40,000,000.00

Other explanation:

On May 9, 2020, the Company bought the structural deposit of Shenyang Heping Branch of Shanghai Pudong Development Bank with a principal of MTB 50 million, which will be due on August 9, 2020 with an expected annualized return rate of 3.45%. On May 11, 2020, the Company bought the structural deposit of Shenyang Shenbei New District Branch of Shengjing Bank with a principal of RMB 50 million, which will be due on August 11, 2020

with an expected annualized yield of 3.70%.

### 3. Derivative financial assets

RMB

Item	Closing balance	Opening balance
Futures	9,100,936.30	3,912,584.30
Total	9,100,936.30	3,912,584.30

### 4. Notes receivable

RMB

Item	Closing balance	Opening balance
Bank's acceptance bill	2,095,361.50	3,696,180.25
Commercial acceptance bill	110,600.00	
Total	2,205,961.50	3,696,180.25

### 5. Accounts receivable

#### A. Categorized by aging

RMB

Aging	Closing book balance
Within 1 year	544,360,705.93
1-2 years	46,602,913.58
2-3 years	28,502,809.76
Over 3 years	88,368,393.12
Total	707,834,822.39

**B. Categorized by bad debt accrual method**

RMB

Category	Closing balance					Opening balance

## B. Explanation of overseas business entity

Name of overseas business entity	Business place abroad	Recording currency	Currency selection basis
Russia Wellhope Agri-Tech	Russia	Ruble	Local currency

## 56. Government grant

Category	Amount	Present item	RMB
			Amount recorded in current gains or losses
Award for green manufacturing demonstration	500,000.00	Other income	500,000.00
Livestock and poultry manure and waste treatment and resource utilization project	2,000,000.00	Non-operating income	2,000,000.00
Fixed assets investment projects	1,430,000.00	Non-operating income	1,430,000.00
Award for production increment	500,000.00	Non-operating income	500,000.00
Deferred income transferred	2,611,752.00	Other income	2,611,752.00
Deferred income transferred	550,000.00	Non-operating income	550,000.00
Subtotal for other projects under RMB 500,000	2,830,847.70	Other income	2,830,847.70
Subtotal for other projects under RMB 500,000	2,202,599.37	Non-operating income	2,202,599.37
Total	12,625,199.07	/	12,625,199.07

## VIII. Change of consolidation scope

### 1. Business combination under different control

#### A. Business combination under different control occurred in current period

Investee	Time point of acquiring	Acquisition cost	Shareholding %	Way of acquisition	Acquisition date	Basis for determining acquisition date	RMB	
							Investee's income from acquisition date to the period end	Investee's net profit from acquisition date to the period end
Yangling Wellhope Agriculture and Animal Husbandry	May 12, 2020	42,000,000	100	Cash investment	May 12, 2020	Control transfer	0.00	-199,657.94

#### B. Combined cost and goodwill

Combined cost	RMB
Cash	42,000,000.00
Total combined costs	42,000,000.00
deduct: Fair value share of identifiable net assets obtained	42,000,000.00
Goodwill or combined cost is less than the amount of the fair value share of the identifiable net assets obtained	

### C. Identifiable assets and liabilities of the investee on the acquisition date

RMB

	Yangling Wellhope Agriculture and Animal Husbandry	
	Fair value on acquisition date	Book value on acquisition date
Assets:	42,000,000.00	37,055,937.27
Fixed assets	32,462,325.48	32,462,325.48
Intangible assets	9,537,674.52	4,593,611.79
Liabilities:		
Accounts payable		
Net assets	42,000,000.00	37,055,937.27
deduct: Non-controlling interests		
Net assets acquired	42,000,000.00	37,055,937.27

#### 2. Other reasons that generate changes in the consolidated scope

The Company invested some new companies, including, Luoyang Wellhope Agriculture and Animal Husbandry, holding 100.00% of shares; Chifeng Wellhope Fuxinyuan Food, holding 70.00% of shares; Shenyang Xiangmai E-Commerce, holding 80.00% of shares; Hebei Taihang Wellhope Food, holding 60.00% of shares; Anyang Wellhope Agriculture and Animal Husbandry, holding 100.00% of shares; Hebei Taihang Wellhope Agri-Tech, holding 62.00% of shares.

Dalian Heyuan Agri-Tech, a subsidiary of the Company, invested Dalian Hongtu Agri-Tech, holding 51.00% of shares; Shandong Heyuan Food, a subsidiary of the Company, invested Shandong Heyuan Agri-Tech, holding 100.00% of shares; Luoyang Wellhope Agriculture and Animal Husbandry, a subsidiary of the Company, invested Tonxu Wellhope Agriculture and Animal Husbandry, holding 100.00% of shares; Anhui Wellhope Agri-Tech, a subsidiary of the Company, invested Anhui Wellhope Haoxiang Hog Breeding, holding 100.00% of shares; Gongzhuling Wellhope Agri-Tech, a subsidiary of the Company, invested Gongzhuling Wellhope Hog Raising, holding 65.00% of shares, and Lishu Wellhope Ecological Breeding, holding 65.00% of shares. All these newly-established companies were included in the consolidated scope.

## IX. Equity in other entities

### 1. Equity in subsidiaries

#### A. Composition of the Company

Subsidiary	Business site	Registered site	Business type	Shareholding %		Mode of acquisition
				Direct	Indirect	
Haicheng Xinzhongxin Wellhope Feed	Haicheng city	Haicheng city	production	51.00		investment
Dalian Huakang Xinxin Food	Dalian city	Dalian city	production	65.00		investment

### X.Risks Related to Financial Instruments

The Company's main financial instruments include equity investment, borrowing, accounts receivable and accounts payable. Detailed descriptions of various financial instruments can be found in the relevant items in Note V. The Company manages and monitors these risk exposures to ensure to control the risks above in the limited scope.

The Company's objective in risk management is to strike a balance between risks and return, minimize the negative impact of risk on the Company's operating results, and maximize the benefits of shareholders and other equity investors. Based on this risk management objective, the basic strategy of the Company's risk management is to identify and evaluate various risks of the Company, set up appropriate limit of risk tolerance, conduct risk management, and supervise various risks in a timely and reliable way to control risks within the limited range.

#### 1. Market risks

##### A. Interest rate risk

The Company's risk of cash flow changes in financial instruments due to the changes in interest rates mainly related to floating-rate bank loans. The Company's policy is to maintain the floating-rate of these loans.

##### B. Foreign exchange risks

Foreign exchange risk refers to the risk of loss caused by exchange rate movement. The Company's main business activities are settled in RMB, with a small amount of import and

export business, changes in exchange rate have little impact on the Company.

## 2. Credit risk

The maximum credit risk exposure that may cause financial losses to the Company mainly comes from financial assets loss caused by the other party of contract failed to perform duty.

In order to reduce credit risk, the Company constantly strengthens the risk management awareness of accounts receivable and only deals with confirmed and reputable third parties. In accordance with the Company's policies, it is necessary to conduct credit audit and approval, carefully confirm the credit limit, implement other monitoring procedures and take necessary measures to recover overdue claims.

## 3. Liquidity risk

In regard of managing liquidity risk, the Company monitors cash and cash equivalents, to satisfy its operation demand, and to reduce the influence caused by cash flow fluctuation. The management of the Company supervises the usage circumstances of bank loans and ensures the Company complying with the agreement of loan.

## XI. Disclosure of fair value

### 1. Fair value of assets and liabilities in the end of period

### XIII.Share-based payment

#### 1. Circumstance of share-based payment

	RMB
Total amount of equity instrument granted by the Company during current period	0
Total amount of exercised equity instruments	4,233,000
Total amount of all invalid equity instruments	244,500

Note:

In accordance with the approved resolutions--Liaoning Wellhope 2018 Restricted Stock Incentive Plan and Its Abstract (draft), Adjusting Related Items regarding to 2018 Restricted Stock Incentive Plan, the Company issued 14.575 million restricted shares to 372 key managers at the price of 4.85 yuan per share in 2018, increased RMB 14.575 million of the registered capital.

This incentive plan should be valid from the date of granting restricted shares to the date when all restricted shares could be removed trading restrictions or repurchased and written off by the Company, with a maximum period of no more than 48 months. The restricted shares should not be transferred, used for guarantee or repaying debts before removing the trading restrictions, and the shares and dividends obtained from the restricted shares due to the Company conducting capital reserve converted to share capital, distributing share dividends, etc., should be simultaneously locked according to the incentive plan. After the expiration of restricted period, the Company shall handle related matters, such as removing trading restrictions, whilst the restricted shares held by the incentive objects who could not meet the conditions of removing restriction, should be repurchased and written off by the Company, relevant equity could not be deferred to the next period.

**Arrangement of restricted shares:**

Arrangement of removing trading restrictions	Time of removing trading restrictions	Percentage of unrestricted shares
First unlocked period	The first trading day after 12 months from the date of finishing the registration of granted shares to the last trading day within 24 months from the date of finishing the registration of granted shares	30.00%
Second unlocked period	The first trading day after 24 months from the date of finishing the registration of granted shares to the last trading day within 36 months from the date of finishing the registration of granted shares	30.00%
Third unlocked period	The first trading day after 36 months from the date of finishing the registration of granted shares to the last trading day within 48 months from the date of finishing the registration of granted shares	40.00%

On March 27, 2020, the board meeting approved the proposal of unlocking restricted common shares after achieving the performance objective disclosed in 2018 Restricted Stock Incentive Plan, 367 managers have been qualified to unlock their restricted shares held in the first lock-up period. 4.233 million restricted shares in the first lock-up period could be traded in the capital market on April 9, 2020.

**2. Equity-settled share-based payment**

RMB

Confirmation method of fair value of equity instrument at the grant date	Closing price at the grant date
Basis for determining the number of exercised equity instrument	It is expected that the conditions can be met and all the granted objects can exercise the equity
